

Hagerty Hall

Interior Existing Condition Documentation

Floor Plan - First Floor, Hagerty Hall

Location

Columbus, Ohio

Architect

Wandel & Schnell Architects, Inc.

Stair Section, Hagerty Hall

Background

Hagerty Hall was built in 1924 with additions constructed in 1948. The building was occupied with classroom space, staff offices, an auditorium and storage space. The University planned to completely renovate the building for a new occupancy.

Scope of Work

- Hagerty Hall is a five story building with a brick and stone exterior. The six floors total approximately 136,000 square feet.
- The architect required Existing Condition Documentation for a complete renovation of the building. Quantapoint was able to provide accurate drawings at a moderate level of detail.

Time Frame

Quantapoint was on-site less than five days to document Hagerty Hall's 136,000 square feet. The final deliverables were completed within five weeks of the on-site work.

Deliverables

- Floor Plans
- Reflected Ceiling Plans
- Interior Elevations
- Building Sections

Mr. Tim Hawk, the project manager, remarked *"Without Quantapoint, our team would have proceeded through the design phase, unaware that the project didn't fit in the building. Through Quantapoint's diligence and accuracy, we were able to catch a huge discrepancy in the square-footage and make adjustments to the program."*
