

Quantapoint Press Release

NGRAIN and Quantapoint Sign Licensing Agreement

NGRAIN Interactive 3D Technology to Enable Visualization in Quantapoint PRISM Software for Industrial and Architectural Services

VANCOUVER, BC and PITTSBURGH, PA — September 14, 2004 — NGRAIN® and Quantapoint, Inc. today announced a multi-year licensing and OEM agreement that will enable Quantapoint to use NGRAIN's patented interactive 3D technology to build advanced visualization capabilities into PRISM™ 5.0, Quantapoint's next generation as-built data management and design solution.

The agreement provides NGRAIN with recurring licensing revenue and on-going royalty income from sales generated by Quantapoint services that use NGRAIN functionality within PRISM. Further details on the financial aspects of the agreement have not been disclosed.

(not a picture or CAD model)*

Quantapoint's solution will enable customers in the processing and architectural industries, such as refineries, power plants, offshore oil platforms, stadiums and historically valuable property, to implement facility re-design projects faster and with more accuracy, virtually eliminating costly project changes and re-work during construction, and accelerating return on investment.

“By incorporating NGRAIN capabilities into PRISM, end users will be able to interactively visualize and extract as-built data in photo-realistic 3D, making the information both more usable and useful than previously possible,” says Eric Hoffman, Chief Executive Officer of Quantapoint. “Embedding NGRAIN into Quantapoint solutions is an important development in as-built data management and design technology that will allow our customers to maximize the significant benefits offered by laser scanning.”

“We're very excited to partner with Quantapoint and to see NGRAIN contribute added value to help address the challenges facing this industry,” says Paul Lindahl, President and CEO of NGRAIN. “Quantapoint is a pioneer in its market, and we look forward to working with them on advancing our technology to support their customer needs as they evolve.”

About PRISM 5.0

PRISM 5.0 is the next generation of as-built data management and design technology for laser scanning. PRISM was created specifically to support the work process and information requirements of the processing industries. It provides a single, consistent environment that enables users to visualize and extract critical as-built information from an interactive photo-realistic 3D image of the as-built data. PRISM 5.0 also offers a number of other benefits to users, including tools that enable quicker and more accurate generation of 2D drawings, the ability to import and display CAD models with the as-built data for design and constructability reviews, and advanced clash detection of CAD models against as-built scan data using PRISM's advanced algorithms. Overall, PRISM helps to dramatically increase design productivity and efficiency, ensure faster, safer and clash-free project design and execution, and helps to significantly reduce costly construction changes and rework.

About NGRAIN

Based in Vancouver, BC, NGRAIN is a privately held company that designs, develops and markets interactive, 3D visualization and simulation software tools. The company's solutions enable organizations in the aerospace, defense, automotive, and manufacturing sectors to more effectively communicate complex product or equipment information, on common computers. NGRAIN's solution portfolio also enables interactive 3D visualization and real time simulations for geospatial, laser scan and medical applications.

In addition to its headquarters, NGRAIN's sales and support infrastructure includes field offices in Ontario, Quebec, Texas and, Washington, DC. More information can be obtained at <http://www.ngrain.com/laserscan>.

About Quantapoint

With over 750 successful projects, Quantapoint, Inc. is the world's most experienced and trusted provider of as-built documentation using laser scanning for the offshore, power, process and architectural markets. Quantapoint is an industry leader and innovator, holding several key technology patents. Quantapoint as-built laser documentation provides more accurate and complete information for design, fabrication and construction decisions, including accurate dimensional fit-up, pre-fabrication and clash detection. The result is reduced costs, optimized schedules, increased quality and improved safety, with project rework being reduced by more than 80%, among other benefits.
